

1. What could have been the primary goal of this soft launch phase?

Please be as precise as possible.

- The intention was to observe the IAP potential of the game through the United Kingdom and the potential impact it could have in the United States. Italy, on the other hand, was chosen to observe the impact in Europe. The Philippines was selected for conducting inexpensive creative tests. With the combination of these factors, changes were made to the in-game metrics. Game B, in particular, aimed to transform into a pay-to-win IAP game. As a result, advertising revenues were gradually reduced first on Android and then on iOS. In essence, the primary goal of the soft launch was to transform Game B into an IP game and release it into the market.

2. Which media channel was the key contributor?

- Main contributor media channel is AdWords for Game B. Because it acquired lots of users and it has 3 types of campaigns with a good balance of CTR and CVR.
- About Game A:
The main contributor to the UA channel is Unity Ads because of its CVR, ROI and IPM advantages.

3. Kindly reflect on the creative performance.

- In Game A, the CTRs are high but the CVRs are low. The created videos are captivating and focused on generating clicks, but the conversion rate of users going from the store to downloading the game is lower compared to Game B. Assuming that Store Listing campaigns attract more user interest, we can better understand why the CTR is so high. In Game B, the creatives' CPIs have been realised at a price almost equivalent to CPI campaigns, indicating an attempt to reduce CPI in long-term campaigns.

4. Which additional in-app events would you have used to optimise the performance?

- It may be advisable to run Level 10 campaigns for CPA optimization as most networks suggest a conversion rate between 15% and 20% within a few days. The earlier the conversion happens, the higher the likelihood of achieving a lower CPI. If the Level 10 completion ratio is high, it indicates that this approach can be tested initially. If sufficient success is achieved, transitioning to a more advanced level achievement event can be considered.
- Considering the high d30 IAP ARPU rate, an IAP ROAS campaign can be tested. A Google Ads d7 IAP campaign supported by Firebase can be launched, taking into account the possibility of low conversion rates.
- Furthermore, analysing game duration and session counts can provide additional insights.

5. What additional data point(s) would you have included in the data file to make the report more comprehensive?

- In order to make the report more comprehensive, it would be beneficial to include additional data points such as the number of sessions played by each user, the duration of each session, the overall duration of the game, the user retention rate, the number of daily active users, and if applicable, the count of rewarded videos watched within the game. Including these data points would provide a more comprehensive understanding of user engagement, retention, and overall game usage patterns.
